

Establecer identificador YY

1. Verificar si previamente ya no se establecio un identificador dentro de MBYJA.net
1. Buscar si el cliente ya no posee una credencial en PPP

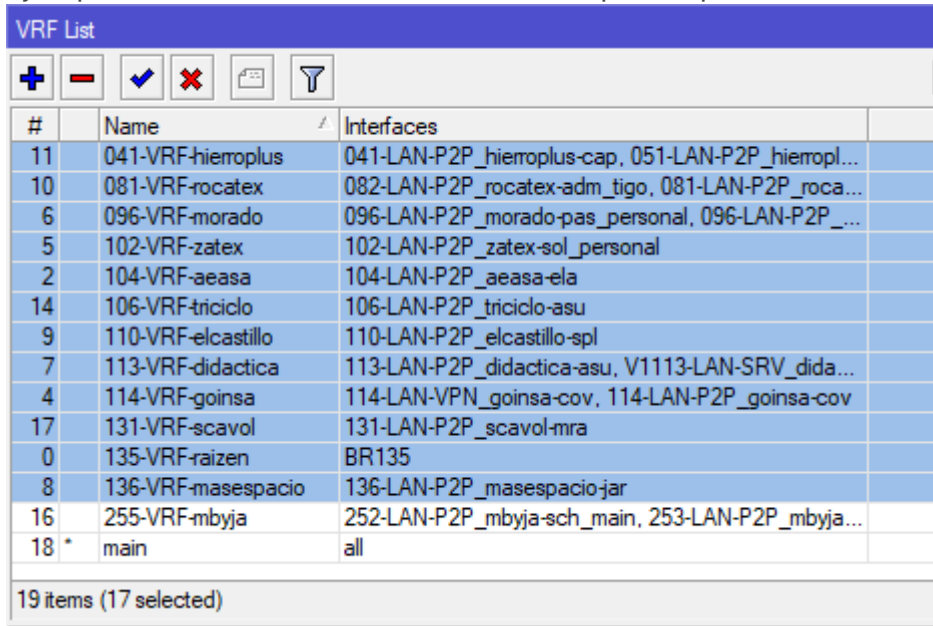

The screenshot shows the 'PPP Secrets' table in WinBox. The 'Secrets' tab is selected, and the table lists various PPPoE users and their associated details. A red vertical line is drawn through the 'Route' column.

2. Si no existe, utilizar el numero de VRF: NUMERO MAXIMO +1

1. Ejemplo: en este caso, el maximo es 136, por lo que el nuevo deberia de ser 137.

The screenshot shows a 'VRF List' window with a toolbar containing icons for adding (+), deleting (-), checking (✓), unchecking (✗), printing (🖨), and filtering (🔍). Below the toolbar is a table with three columns: '#', 'Name', and 'Interfaces'. The table lists 19 items, with 17 selected. The last item, 'main', is marked with an asterisk and is not selected.

#	Name	Interfaces
11	041-VRF-hieroplus	041-LAN-P2P_hieroplus-cap, 051-LAN-P2P_hieropl...
